EXPERIENCE

Selise Digital Platgorm, Dhaka — Senior Software Engineer

April 2024 - Present

I was promoted due to consistent performance and growing responsibilities, where I mentored junior developers, ensured code quality, and provided accurate project estimations while contributing to the Fusion team and collaborating with international clients. Over time, I took ownership of project planning, improved development workflows, and handled complex tasks independently. I also apply key design patterns—creational, structural, and behavioral—in real applications to build scalable and maintainable systems.

Selise Digital Platgorm, Dhaka — Software Engineer

Nov 2019 - Mar 2024 . 4 year 5 month

Thanks to my prior experience and continuous learning mindset, I quickly adapted and took on additional responsibilities. I joined as a Software Engineer on a three-month probation and worked on multiple web applications and services using Angular, React, .NET Core, and Node.js. I also mentored junior developers and contributed to the team's overall growth.

Selise Digital Platgorm, Dhaka — Full Stack Development

Dec 2020 - Present

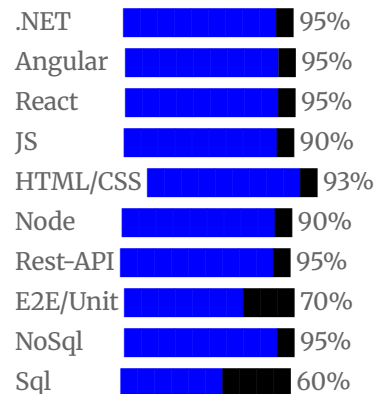

Starting in December 2020, I worked on the backend of an existing project where I learned the system architecture from senior developers using Visual Studio, .NET Core, and the .NET Framework. I contributed to moving the system toward a microservice architecture, collaborated with the UI/UX team, joined client discussions, and managed production deployments across the software development lifecycle. I also handled project maintenance, supported test automation from both developer and SQA perspectives, and maintained reliable source control to ensure smooth and stable releases aligned with business goals.

Father Business, Dhaka — Owner

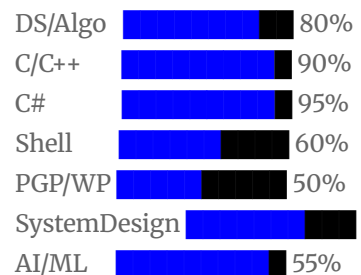

Apr 2019 - Oct 2019 . 7 month

Due to my father's sudden illness and the risk of our family business collapsing, I temporarily left my job to support my family and keep the business running. Managing unpaid dues from wholesalers and limited income required my full attention at that time. Meanwhile, I continued improving my skills and staying

connected with my professional field, and later I was able to rejoin my former colleagues at Selise Digital Platform.

Selise Digital Platform, Dhaka — Junior Software Engineer

Feb 2018 - Mar 2019 · 1 year 2 months

I joined as a fresher and learned a lot of new skills. My main work was on a project built using AngularJS and the .NET framework. Since I was new, I was initially assigned to handle the AngularJS part of the project.

PROJECTS

Customer Support & Insurance Change Management System - Feb 2024 - Present

Tech: React.js · Tailwind CSS · State Management · API Integration · FE Developer · Insurance

Key Contributions:

- Developed the frontend UI and core functionality using React.
- Built a system to manage complex insurance change requests (Power of Attorney, KVG updates, personal/family details).
- Implemented dynamic navigation to allow support agents to quickly access pinned customers and key data.
- Designed workflow-driven interfaces where updates trigger controlled processes across related data.
- Developed advanced UI features such as undo/redo and optimized drawer-based forms for better usability.
- Ensured data consistency, role-based access, and smooth operational workflows.

Omnichannel Insurance & Pension Lifecycle Advisory Platform - Jan 2023 - Feb 2024

Tech: Angular 13 · .NET Core · MongoDB · React Native · Design patterns · Role-Based Access Control (RBAC) · Data Structures · RabbitMQ

Key Contributions:

- Led architecture and delivery of a **life-event-based insurance and pension advisory platform**.
- Designed support for **multi-pillar pension schemes (1st, 2nd, 3rd Pillar)** with dynamic benefit and tax-based calculations.
- Built a **customer-advisor consultation system** to include advisor onboarding and paid advisory workflows.
- Developed an ecosystem with **Customer, Advisor, and Partner Portals** enabling partners to offer pension products.
- Integrated **Payraxe (payments), Taxware APIs (tax optimization), and Microsoft Teams (consultation scheduling)**.
- Drove **technical decisions, feature prioritization, and cross-team coordination** across the product lifecycle.

Scalable Product & QR-Based Unique ID Management System - Jul 2022 - Dec 2022

Tech: Angular 13 · .NET Core · MongoDB · Data Structures · Angular Material · Full-Stack Development

Key Contributions:

- Designed and implemented a **large-scale product management system** supporting hierarchical products, packages, and item-level tracking.
- Built a **high-performance UID generation mechanism** using optimized data structures and **binary search-based allocation** for fast uniqueness validation.
- Improved system scalability by significantly reducing **UID generation and lookup time** compared to linear approaches.
- Integrated **QR code generation and scanning workflows** for instant product and package information retrieval via UID resolution.
- Ensured **enterprise-scale performance, data integrity, and client-specific UID formatting and sequencing**

requirements.

CRM & Insurance Sales Management System - Dec 2020 - Jun 2022

Tech: .NET Core · Angular 13 · MongoDB · REST APIs · Full-Stack Development

Key Contributions:

- Designed and developed a **large-scale internal CRM and insurance sales management platform** to support end-to-end sales operations.
- Implemented core CRM features including **sales pipeline, lead & opportunity tracking, task/activity management, and calendar-based scheduling**.
- Built **sales performance monitoring and reporting** to enable data-driven decisions for management teams.
- Defined workflows and permissions for multiple roles such as **Internal/External Sales and Sales Management** with secure role-based access.
- Delivered both **frontend (Angular 13) and backend (.NET)** solutions with a focus on scalability, performance, and maintainability.

(RBAC) E2E Automation Test – Cypress - Apr 2021 - May 2021

Tech: Cypress · Test Automation · RBAC · HTML · CSS

Key Contributions:

- Implemented **Cypress end-to-end tests** to validate frontend role-based access across multiple user roles.
- Automated login and verification of **menu and sub-menu permissions** to detect unauthorized access.
- Created a **role vs menu visualization table** for clear permission auditing.
- Reduced manual regression testing and improved reliability of the access control system.

Workflow Management & Digital Forms Platform

- Feb 2018 - Mar 2019 & Nov 2019 - Nov 2020

Tech: AngularJS · Workflow Management · MongoDB · PDF Creator · FE Developer

Key Contributions:

- Designed and developed a comprehensive workflow management system for the insurance domain, enabling end-to-end digital processing of complex business workflows. The platform supports KYC forms and insurance policy application workflows consisting of 30+ dynamic pages, executed through step-by-step, condition-based workflows.
- Implemented a configurable workflow engine using .NET Core, allowing new insurance applications to be onboarded by simply inserting configuration data—without requiring code changes. Business users can design and manage form pages while reusing the same underlying workflow engine.
- Built a robust PDF generation system using HiQPDF, enabling dynamic PDF creation from submitted forms. Custom PDF templates were designed to meet regulatory and business requirements, ensuring accurate document generation for insurance applications and records.

Authentication & Authorization Microservice - Personal project

Tech: NestJS · Express.js · Role-Based Access Control (RBAC) · Microservices · MongoDB

Key Contributions:

- Designed and implemented a reusable authentication and authorization microservice using NestJS and Express.js, built to be easily integrated across multiple applications and systems.
- Implemented a secure JWT-based authentication system with password hashing, ensuring safe user credential management. Developed a fine-grained permission and role-based access control (RBAC) system, allowing precise control over CRUD operations—users without proper permissions are restricted from creating, updating, or deleting data.

- The service enforces authorization at the API level, ensuring that only authorized users can perform sensitive operations. Built with a microservice architecture, the solution is decoupled, scalable, and can be plugged into any application requiring centralized authentication and authorization.

[Store Management - admin](#) - Personal project

Tech: Node.js · NestJS · React.js · MongoDB · Redis

Key Contributions:

- This is an admin portal for store, where,
- Sales Analytics Dashboard Overview, This dashboard provides a summarized view of monthly sales performance.
- It includes: Revenue Summary - Displays total income, invoices, and product counts. Sales Overview Chart - Visual representation of revenue trends. Top-Selling Products - Bar chart showing the most popular products. Wholesaler Contributions - Pie chart highlighting key contributors. Recent Invoices - Quick view of the latest transactions with total bill, paid amount, and profit.
- Products Menu: You can add modify your product info here
- Wholesalers Menu: you can modify here your wholesaler info, by clicking on whole saler you can see invoices or sells of that product. also you can send sms to desired wholesaler containing a due message.
- Invoice Menu: You can show all the invoices here, also if do a mistake then you can update the invoice here also.

[Online Judge System for Problem Evaluation and Submission Tracking](#) - Personal project

Tech: Angular · Node.js · MongoDB · Problem Solving

Key Contributions:

- Led architecture and delivery of a **life-event-based insurance and pension advisory platform**.
- Designed support for **multi-pillar pension schemes (1st, 2nd, 3rd Pillar)** with dynamic benefit and tax-based calculations.
- Built a **customer–advisor consultation system** including advisor onboarding and paid advisory workflows.
- Developed an ecosystem with **Customer, Advisor, and Partner Portals** enabling partners to offer pension products.
- Integrated **Payraxe (payments), Taxware APIs (tax optimization), and Microsoft Teams (consultation scheduling)**.
- Drove **technical decisions, feature prioritization, and cross-team coordination** across the product lifecycle.

EDUCATION

Rajshahi University of Engineering and Technology(RUET) Rajshahi — B.Sc. in Computer Science & Engineering

Mar 2013 - Dec 2017

Cgpa - 3.48 / 4.00

RAJUK Uttara Model College

Dhaka — Science

Mar 2010 - Dec 2012

Cgpa - 5.00 / 5.00
