Ashikur Rahman Nabir

Senior Software Engineer | Selise Digital Platform (SELISE)

I focus on products design and security where the UI must feel fast, clear, and trustworthy for the people using it every day. and make everything secure using RBAC and other security measures. I have a strong foundation in data structures and algorithms, which helps me write efficient code and solve complex problems. I have experience with C/C++, C#, Java, and JavaScript, and I enjoy learning new technologies and applying them to real-world projects.

Why I am a strong hire distilled into a short recruiter read:

- Enterprise software delivery across insurance, CRM, and workflow products.
- Strong front-end and backend ownership with practical backend and automation knowledge.
- A mentoring mindset focused on clarity, empathy, and reliable execution.

CORE SKILLS

Enterprise UIs

Workflow systems

API integration

Team leadership

TECHNICAL STACK

.Net 99%

Angular 99%

React 99%

JavaScript 95%

HTML/CSS/SASS 97%

Node 92%

Rest-API 95%

● TOOLS

VS Studio

Postman, Insomnia

Docker, Kubernetes

Source control

Sprints and Agile

IIS

Redis

Websocket

● EDUCATION

BSc in Computer Science and Engineering (CSE)

Rajshahi University of Engineering and Technology (RUET)

Mar 2013 - Dec 2017

CGPA - 3.48/4

Higher Secondary School Certificate (Science)

RAJUK Uttara Model College

Mar 2010 - Dec 2012

GPA - 5.00/5

● EXPERIENCE

APR 2024 - PRESENT

Current
focus

Selise Digital Platform - Senior Software Engineer

Promoted for consistent delivery, code quality, and stronger ownership of planning and mentoring.

Review and support junior teammates while keeping work moving.

Contribute to planning, estimation, and best-practice delivery.

Work with international clients on product-focused engineering tasks.

DEC 2020 - PRESENT

Product delivery

Full Stack Development

Took on backend, collaboration, and delivery ownership on top of frontend work.

Contributed to backend structure and microservice adoption on an existing project.

Worked closely with UI/UX and client-facing stakeholders.

Helped with production deployment, maintenance, and test strategy.

NOV 2019 - MAR 2024

Leadership
growth

Selise Digital Platform - Software Engineer

Expanded into broader frontend and full-stack delivery across multiple enterprise projects.

Worked across Angular, React, .NET Core, and Node.js projects.

Mentored junior developers and contributed to team growth.

Supported delivery from development through deployment and maintenance.

Family - Father Business

Paused my job to support my family business during a difficult period.

Handled the business responsibility while staying connected to my engineering career.

Kept learning and followed the tools and practices used by my previous team.

Returned to SELISE after stabilizing the situation.

● SELECTED PROJECTS

CROSS-PLATFORM PRODUCT

Project lead

Omnichannel Insurance & Pension Lifecycle Advisory Platform

Led a customer, advisor, and partner ecosystem that helped users explore pension planning, consultations, and payments across web and mobile.

Delivered a multi-portal product with secure flows for advisory services and lifecycle planning.

Built the customer portal, advisor portal, and partner portal as connected experiences.

Supported pension recommendations, consultation booking, payment flows, and Teams-based meetings.

Contributed to architecture, feature prioritization, and cross-team coordination as project lead.

Angular 13

.NET Core

MongoDB

React Native

RabbitMQ

RBAC

Authentication and Authorization Microservice

Designed a reusable auth service with JWT login, password hashing, and fine-grained RBAC for CRUD operations.

Created a plug-in service that can be reused across applications needing centralized auth.

Built JWT authentication and secure password handling.

Added authorization rules that block CRUD actions without the right permissions.

Structured the service as a reusable microservice rather than a one-off module.

NestJS

Express.js

RBAC

Microservices

MongoDB

Store Management Admin Portal

REFERENCES

BE project

FE admin portal

FE client portal

Created an admin portal with sales analytics, product management, wholesaler workflows, and invoice editing, backed by a live client portal.

The client portal is dynamic with the admin portal, so new or updated products in the admin side automatically affect the client experience.

Added analytics cards, charts, and recent invoice views for quick decision-making.

Built product, wholesaler, and invoice management flows.

Kept the interface focused on operational clarity rather than visual clutter.

Node.js

NestJS

React.js

MongoDB

Redis

Online Judge System for Problem Evaluation

Built an online judge for uploading problems, submitting solutions, and tracking submission history.

Creates a transparent evaluation flow for programming practice and problem solving.

Supports admin problem uploads with test cases and verdict files.

Lets users submit outputs and review their submission history over time.

Designed to be extensible for future execution and grading automation.

Angular

Node.js

MongoDB

Problem Solving

Config-Driven Portfolio Template

Built this portfolio as a reusable template driven by a single configuration file and modern Next.js components.

Demonstrates how I structure an app to be maintainable, reusable, and recruiter-friendly.

Portfolio content is separated from the UI so updates stay simple.

Uses Next.js, React, and Tailwind for a fast, responsive experience.

Designed to work as a polished personal site or a starter template for others.

Next.js

Tailwind CSS

React.js
